Appropriate physical contact in aerial training.

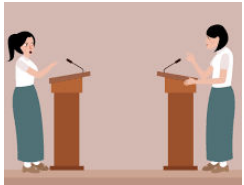

The teacher will use their hands, and occasionally a foot or knee, to illustrate a concept to a student or to adjust parts of a student's body (especially with the younger students). Rope posture often requires adjusting the rib-cage and the buttock area simultaneously and it is sometimes necessary to touch the inner thigh, especially with younger students.

The Cavendish School recognises that such physical contact is a potentially complex area, and the School also fully recognises its responsibilities for safeguarding students and teachers and for protecting their welfare.

The following principles and procedures are in place to fulfil the School's obligations:

- Contact by the teacher is made with particular awareness of the needs of each individual, to assist the young student in correcting placement.
- The teacher will treat any physical contact with due sensitivity and care
- Contact will not involve force or the use of any instrument
- The teacher will be mindful of location and avoid situations where they are isolated with a student;
- Parents or guardians should report any concerns to the Head of the Cavendish School.

Therefore, our classes are tailored to meet their developmental needs through imagination, stories, role play/drama, games, music, dance and movement. Offering them time to explore ideas, build confidence and express themselves. We also carefully select children's literature and illustrations to help children develop their understanding of the world and the morals we should live by. Children enjoy a creative way of learning as well as using the arts therapeutically.	A calm and supportive space where students can complete homework, receive help when needed, and develop independent study skills in a positive learning environment.	The girls will get the opportunity to research different topics, take part in formal debates with their peers and play a number of games to develop their public speaking skills.
